Car Trip - Cars

by Shelly Hazard

Two sisters spent the last few days traveling across the United States, from Massachusetts to Missouri, by car. To pass the time as they drove, they started watching the other traffic on the highways. While there were many other trucks and cars on the road, they noticed that they kept passing, or being passed by, several other cars. Gradually, as the miles passed, they realized that these other cars were also travelers, traveling in the same direction and perhaps even to the same destinations, as they were. Determine the state the sisters were driving through when they first noticed each of their companion travelers, the car make and color, the number of people in the car, and the license plate number of each of those other travelers.

1. The car they saw in Connecticut wasn't the red Toyota. The car with only three people in it, which wasn't the Mercedes, had a license plate number of 6210EB.
2. The Saturn was spotted in Indiana. The Chrysler had a license plate number of 3147WY.
3. The cars with a Y in the license plate number had either one or four people in them.
4. The green car from Pennsylvania didn't have a license plate number of 132SBJ. The grey car didn't have 542NYZ for a license plate number.
5. The car with one person in it was seen in Ohio. The car they saw in Connecticut had more people in it than the red car but less than the Chrysler.
6. The black car had two people in it.
