

Answer: It will take Roland 45 minutes to complete his task.

Here's how: Roland needs to cut one of the three link sections into its individual links. Using the three loose links he can join the three remaining sections together. Taking 15 minutes to cut and weld each of the three links, Roland will need 45 minutes to finish ($3 \times 15 = 45$).

Bonus: Three of Roland's heroes were Faberge, Tiffany and Cartier. What did all three men have in common? Were they: A. modern clothing designers, B. European jet-setters, or C. 19th century Master Jewelers?

Answer: All three were famous Master Jewelers in the 1800s.
